

POWER GREASE

LUBRICATION AND MAINTENANCE

- **Transparant / White**
- **Pressure resistant**
- **Water resistant**
- **Very wide temperature range (-20 ° C to + 230 °)**

PRODUCT DESCRIPTION:

Power Grease Spray is a high quality product based on mineral oils, greases and solvents.

APPLICATIONS:

Power Grease is a high quality grease that can be used ideally as universal lubricant with excellent pressure and temperature resistance.

The product is in the first instance liquid on application, so that it can penetrate deeply between the parts.

If the propellant is gone, there remains a solid and pressure-resistant grease.

Due to these properties is the Power Grease extremely suitable for the lubrication of parts, where metal rubs on metal. Another major advantage of the product is that it's viscostatic. If the weather gets warmer the product becomes thicker, if it gets colder the product will become thinner, that means there is always a optimum lubrication.

INSTRUCTIONS:

- Shake the aerosol before use.
- Spray carefully on the to be treated object.
- Leave the product rest.

SPECIFICATIONS:

Colour:	Transparant/White
Smell:	Dissolvent
Solvents:	Hydrocarbons
Propellant:	Propane / Butane
Physical:	See MSDS
